

Rotary indexing tables DHTG

FESTO

Characteristics

At a glance

- Sturdy mechanical system
- Easy project engineering and commissioning
- Indexing stations: 2, 3, 4, 6, 8, 12, 24
- Integrated functions:
 - Overload protection
 - Sensing
 - Cushioning adjustment
- Speed setting
- Changing the direction of rotation

The technology in detail

- [1] Through-hole for energy through-feed
- [2] Thread for position sensing
- [3] One-way flow control valve for regulating speed
- [4] Compressed air supply port for reciprocating motion
- [5] Compressed air supply port for clockwise or anticlockwise rotation
- [6] Adjusting screw for cushioning adjustment

Operating modes

Clockwise

- Just one valve required

Anticlockwise

- Just one valve required

Reciprocating motion

- After conversion with a reciprocating motion kit
- Two valves required

Flexible control: Clockwise, anticlockwise, reciprocating motion

- After conversion with a reciprocating motion kit
- Two valves required

Examples of easy connections

Clockwise/anticlockwise

Reciprocating motion/flexible control

Characteristics

The technology in detail

Overload protection

To prevent the rotary indexing table from being damaged by an excessive mass moment of inertia, e.g. during setting operation or in the event of shock absorber failure, sizes 140 and 220 feature overload protection.

If the mass moment of inertia is too large, the securing pin is pressed against the spring force by the resulting radial force. It then slides forward on the toothed segment.

This shift in position between the index plate and toothed segment means that the securing pin can no longer engage and the rotary indexing table does not move. The table can be made ready for use again by turning it back.

Energy through-feed

The energy through-feed can be used to transfer electrical signals or compressed air through the hollow shaft. This enables the fast and easy supply of the parts mounted on the rotating plate.

Also suitable for IO-Link signal data transfer.

- [1] Electrical connection (output)
- [2] Energy through-feed housing
- [3] Compressed air supply port (output)
- [4] Rotary indexing table
- [5] Compressed air supply port (input)
- [6] Electrical connection (input)

Mounting options

Direct mounting from above

Direct mounting from below

 Note

The rotary indexing tables are not designed for the following or similar application examples.

- Machining
- Aggressive media

- Grinding dust

- Welding spatter

Characteristics

Application example

Rotating plate with stationary centre section

For mounting handling units or other devices in the centre of the rotary indexing table

Type codes

001	Series

Design	Gear coupling				
	Gear rack/pinion				
	Force pilot operated motion sequence				
Mode of operation	Double-acting				
Type of mounting	Via through-hole and centring sleeve				
Mounting position	Any				
Cushioning	Adjustable shock absorber stroke, hard characteristic curve				
Indexing	2, 3, 4, 6, 8, 12, 24		3, 4, 6, 8, 12, 24		
Theoretical torque at 6 bar	[Nm]	2.1	4.4	18.1	58.9
Parallelism of plate ¹⁾	[mm]	≤ 0.04			
Axial eccentricity of plate ²⁾	[mm]	≤ 0.02			
Concentricity of plate ³⁾	[mm]	≤ 0.02			
Repetition accuracy of swivel angle	[°]	≤ 0.03			
Max. mass moment of inertia without flow control ⁴⁾	[kgm ²]	0.016	0.03	0.3	2.5
Cycle time without flow control		→ Page 10			
Position sensing		For inductive proximity switches			
Weight					
DHTG-...	[kg]	2.0	4.5	10	24
DHTG-...-P4	[kg]	4.39	6.89	12.49	26.64
DHTG-...-P4E4	[kg]	5.12	7.62	13.22	27.37
DHTG-...-P4L12	[kg]	5.15	7.65	13.25	27.40

- 1) Parallelism of the plate surface relative to the housing support
- 2) Measured on the surface and at the edge of the plate in relation to the housing support
- 3) Measured on the inner diameter of the plate in relation to the housing
- 4) Operation with flow control can increase the mass moment of inertia by 50%. The service life of the shock absorber is reduced in this case. The mass moment of inertia depends on the number of indexing stations and the switching frequency (→ page 11)

-  - **Note**

The "clockwise" rotation of the plate can be controlled via an internal flow control valve in combination with the reciprocating motion kit. For "anticlockwise" rotation, external actuation via an additional one-way flow control valve GRLA is needed.

Data sheet

Operating and environmental conditions	
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]
Note on operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure [bar]	4 ... 8
Ambient temperature [°C]	5 ... 60
Storage temperature [°C]	-20 ... +80
Degree of protection	IP54 ²⁾
Corrosion resistance CRC ¹⁾	2

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

2) The specified degree of protection applies to the top side of the rotary indexing table. The underside must be provided with appropriate external protection for the environment.

Static characteristic load values

The indicated forces and torques refer to the locked table and can also act on the table plate.

Size		65	90	140	220
Forces					
Max. axial force F	[N]	1000	2000	4000	5000
Max. radial force R	[N]	2000	5000	6000	8000
Torques					
Max. tilting torque M	[Nm]	100	150	300	500
Max. tangential torque T	[Nm]	100	150	200	500

Materials

Sectional view

Rotary indexing table	
[1] Plate	Galvanised steel
[2] Cover	Wrought aluminium alloy
[3] Housing	Wrought aluminium alloy
- Stops	Galvanised steel
- Seals	NBR, TPE-U (PU)
Note on materials	
DHTG-...	Free of copper and PTFE
DHTG-...-P4...	Cables with PTFE insulation
	Contains paint-wetting impairment substances

Data sheet

Calculating the cycle time

The rotary indexing tables are equipped with a hydraulic shock absorber, which means that the max. frequency of the shock absorber must also be taken into account when calculating the cycle time.

The switching time comprises:

Switching time = Unlock, rotate, lock and return stroke of working piston.

The cycle time is calculated as follows:

Cycle time = Switching time + Processing time + Dwell time.

The max. achievable switching frequency in relation to the mass moment of inertia can be read off from the switching frequency graph. The switching time can be calculated from this based on $T = 60/f$. The processing time is calculated based on the time required for the respective customer application (e.g. time for component removal, press-in time, etc.). A dwell time may be necessary if the cycle time is shorter than the min. possible cycle time.

Calculation example

DHTG-140 with 8 indexing stations The customer application requires
and a mass moment of inertia of 300 ms per step for inserting and
0.1 kgm². removing parts.

Switching frequency

Max. permissible cycle frequency

$$T_{\text{switching time}} = 1/f = 60 \text{ s}/130 = 0.461 \text{ s} = 461 \text{ ms}$$

$$\text{Dwell time} = \text{Min. permissible cycle time} - \text{Switching time} - \text{Processing time}$$

$$\text{Dwell time} = 1017 \text{ ms} - 461 \text{ ms} - 300 \text{ ms} = 256 \text{ ms.}$$

$$T_{\text{min. permissible cycle time}} = 60 \text{ s}/59 = 1.017 \text{ s} = 1017 \text{ ms}$$

Given the fact that the switching time + processing time is shorter than the min. permissible cycle time, the rotary indexing table must stay in the end position before the next step is performed. In other words, between the switching operations an additional dwell time of 256 ms must be allowed for in the control sequence.

Energy through-feed

DHTG-...-P4

DHTG-...-P4E4

DHTG-...-P4L12

Function

The energy through-feed can be used to transfer electrical signals or compressed air through the hollow shaft.

Advantages

- Fast and easy supply of the parts mounted on the rotating plate
- Tubing and electrical cables are not damaged by the rotation
- Two variants available:
 - Pneumatic
 - Pneumatic and electrical

Pneumatic

DHTG-...-P4

Pneumatic/electrical

DHTG-...-P4E4

DHTG-...-P4L12

Accessories

Wiring of the proximity switches in combination with the energy through-feed

Sample illustration using DHTG-...-P4E4

- [1] Y-distributor
NEDY-L2R1-V1-...
- [2] Proximity switch with plug
- [3] Electrical connection (output)
- [4] Compressed air supply port (output)
- [5] Compressed air supply port (input)
- [6] Electrical connection (input)

Note
For variant DHTG-...-P4E4, proximity switches with plugs must be used for the attachments at the output. These are then connected to the energy through-feed module using a Y-distributor.
