1. Teileliste

Feststelleinheit
DADL-EL-Q11-...:
[1] Zylinder
einfachwirkend

[2] Schraube
Zentrierhülse

[3] Adapterplatte

[4] Schraube
Zentrierhülse

[5] Schraube
Zentrierhülse

[6] Schraube
Zentrierhülse

[7] Flansch

[8] Zentrierhülse

[9] Klemmelement
DADL-EC-Q11-...:
[11] Schraube

[12] Nocke

[13] Nutenstein

Nicht im Lieferumfang:
[14] Schwenkantrieb
DRRD

Bestimmungsgemäß dient die Feststelleinheit DADL-EL-Q11-... zur Endlagenverriegelung des Schwenkantriebs [14].

Weitere Klemmelemente [10] können als zusätzliche Verriegelungsnocken für Schwenkantrieb mit Zwischenstellung DRRD-...-PS1 bestellt werden.

2. Allgemeine Hinweise

⚠ Warnung

Verletzungsgefahr durch unerwartete Bewegungen von Bauteilen!

- Nur im drucklosen Zustand montieren bzw. demontieren.
- Sicherheitshinweise in der Bedienungsanleitung des Schwenkantriebs beachten.
- Beachten, dass dieses Produkt ohne zusätzliche Maßnahmen entsprechend gesetzlich vorgegebener Mindestanforderungen als sicherheitsrelevantes Teil von Steuerungen ungeeignet ist.

ℹ Info

Zylinder [1] besitzt zur eigenen Endlagenabfrage zwei T-Nuten für Näherungsschalter.

- Entsprechendes Zubehör aus unserem Katalog wählen
(→ www.festo.com/catalogue).

3. Montage

3a. Montage Zylinder [1]

- Gewünschte Position des Zylinders [1] wählen. Er ist von links, wie von rechts auf den Schwenkantrieb montierbar.

Clamping unit/clamping component DADL-EL/EC-Q11-...

1. Parts list

Clamping unit
DADL-EL-Q11-...:

- [1] Cylinder single-acting
- [2] Screw
- [3] Centring sleeve
- [4] Adapter plate
- [5] Screw
- [6] Centring sleeve
- [7] Screw
- [8] Flange
- [9] Centring sleeve
- [10] Clamping component

DADL-EC-Q11-...:

- [11] Screw
- [12] Cam
- [13] Slot nut

Not included in delivery:

- [14] semi-rotary drive

DRRD

According to its intended use, the clamping unit DADL-EL-Q11-... provides end-position locking of the semi-rotary drive [14].

Additional clamping components [10] can be ordered as supplementary locking cams for the semi-rotary drives with intermediate position DRD-...-PS1.

2. General instructions

⚠ Warning

Danger of injury due to uncontrolled movement of components!

- Mount or dismantle only in a pressureless status.
- Observe the safety instructions in the operating instructions of the semi-rotary drive.
- Note that this product is inappropriate for use in safety-related sections of control systems without additional measures conforming to statutory minimum requirements.

ℹ Information

For its own end-position sensing, the cylinder [1] has two T-slots for proximity switches.

- Select the corresponding accessories from our catalogue
(→ www.festo.com/catalogue).

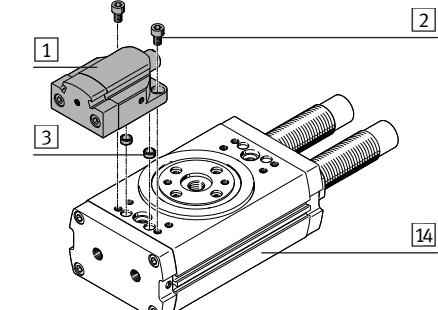

3. Mounting

3a. Mounting the cylinder [1]

- Select the desired position of the cylinder [1]. It is mountable on the semi-rotary drive from the left or from the right.

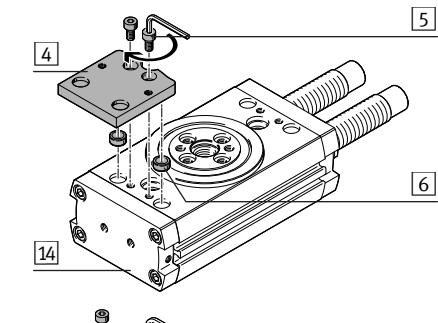

DADL-EL-Q11- Mounting variants

16	A
20/25/32	B
35/40/50/63	A

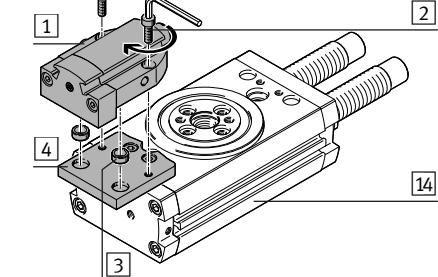

Mounting variant A:

- Mount the cylinder [1] directly to the semi-rotary drive [14] with the screws [2] and centring sleeves [3].
- Comply with the permissible tightening torque (→ section 6).

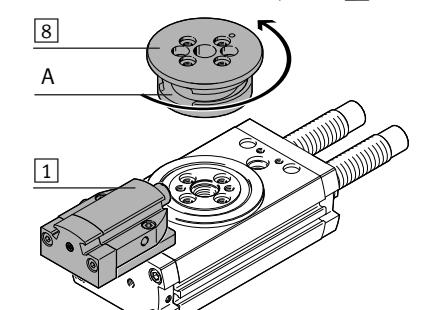

Mounting variant B:

- Mount the adapter plate [4] directly to the semi-rotary drive [14] with the screws [5] and centring sleeves [6].
- Comply with the permissible tightening torque (→ section 6).
- Mount the cylinder [1] directly to the adapter plate [4] with the screws [2] and centring sleeves [3].
- Comply with the permissible tightening torque (→ section 6).

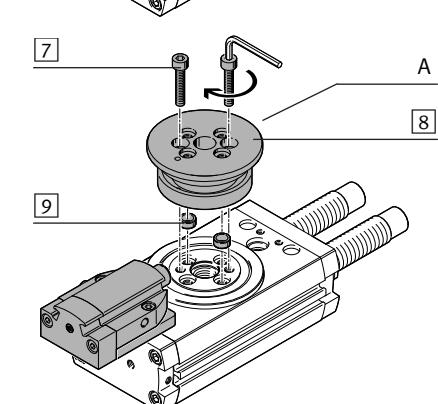

3b. Mounting the flange [8]

- Position the semi-rotary drive [14] in neutral position.

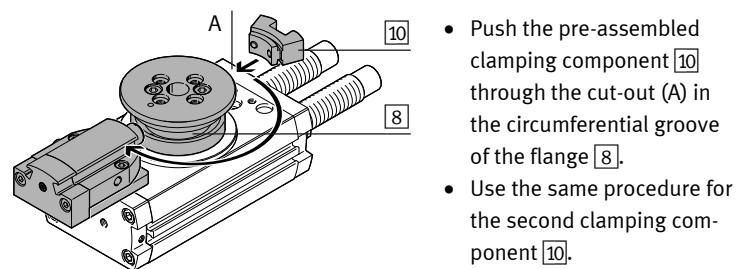

- Orient the flange [8] so the cut-out (A) for inserting the clamping component [10] is on the opposite side of the cylinder [1].

- Fasten the flange [8] with the screws [7] and centring sleeves [9].
- Comply with the permissible tightening torque (→ section 6).

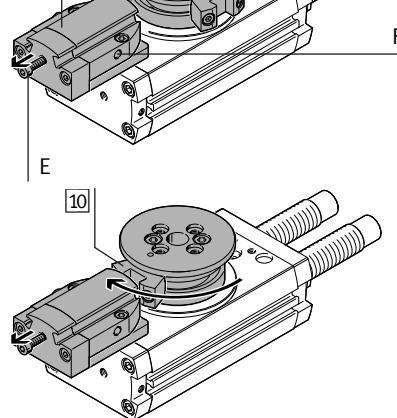

3c. Mounting clamping component [10]

- Fit a slot nut [13] to each cam [12] with the screws [11].

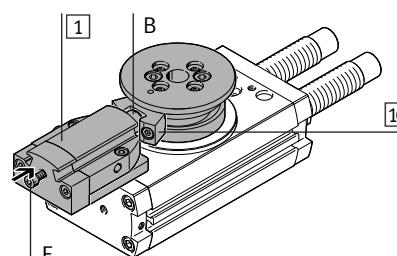

4. Setting clamping component [10]

- Position the semi-rotary drive [14] into a desired end position.
- Pull in the piston rod (B) of the cylinder [1] by hand (→ section 5).

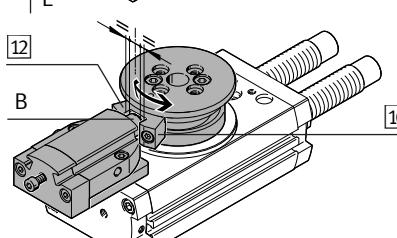

Alternative:

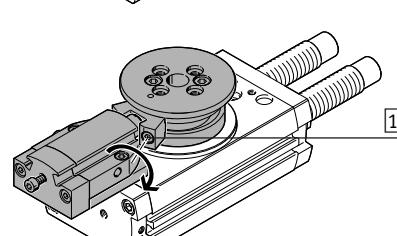

- Connect the port (F) at the cylinder [1] to the compressed air and retract the piston rod (→ **Warning** in section 2).
- Place the clamping component [10] in front of the piston rod (B).

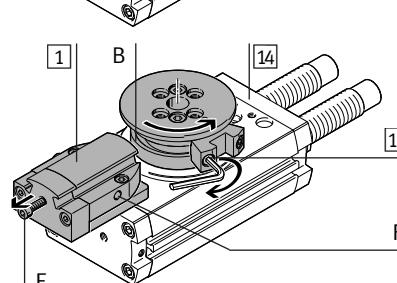

- Let the piston rod (B) of the cylinder [1] retract slowly into the clamping component [10].

- Position the clamping component [10] so the piston rod (B) is located in the middle of cam [12].

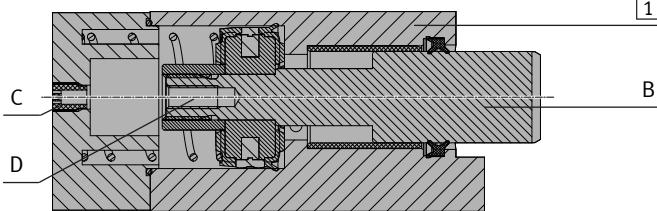

- Tighten the screws [11] only lightly at first.

- Pull in the piston rod (B) of the cylinder [1] by hand.
- Twist the semi-rotary drive [14] until the screws [11] are freely accessible.
- Tighten screws [11].
- Comply with the permissible tightening torque (→ section 6).
- Make tubing connection to the clamping unit at the port (F).

5. Emergency release or manual retraction of the piston rod

In case of pressure failure or to adjust the clamping component [10], the piston rod (B) of the cylinder [1] can be manually retracted as follows:

- Unscrew filter nipple (C).
- Turn the screw (E) into the female thread (D).

DADL-EL-Q11-	16	20/25	32	35/40	50	63
Thread	M2	M2.5	M4	M4	M4	M4
Screw length	≥ 20 mm	≥ 20 mm	≥ 25 mm	≥ 30 mm	≥ 30 mm	≥ 30 mm

- Tighten the screw (E) and by so doing, retract the piston rod (B).

After the process is ended:

- Unscrew screw (E) and screw in filter nipple (C) until flush

6. Screw sizes and tightening torques $M_A^{(1)}$

DADL-EL-Q11-	16	20/25	32	35/40	50	63
[2]	M3x7	M4x12	M4x14	M6x10	M8x12	M10x20
[5]	[Nm]	2.5	4.5	4.5	12	18
[7]	[Nm]	—	M4x8	M6x10	—	—
[11]	[Nm]	—	4.5	12	—	—
(F)	[Nm]	M3x12	M4x14	M5x18	M6x18	M10x20
		M5			G1/8	
		1.2	3	6	10	10

7. In operation

→ Note

Avoid operative malfunctions and material damage!

- Make sure that in the locked status the clamping unit is not impinged with lateral forces from the semi-rotary drive [14].
- Unlock DADL before the swivel motion is initiated into the other end position
- Do not use DADL as a holding device in the end positions. The occurrence of lateral forces must be absorbed by pneumatic actuation on the end position of the semi-rotary drive [14] that is travelled to.
- Carry out the following steps after a pressureless, locked end position status has been reached:

 1. Pressurize the semi-rotary drive [14] in the direction of the end position.
 2. Pressurize the clamping unit at the connection (F).

• Observe the process during operation as follows:

1. Clamping unit unlocked.
2. The semi-rotary drive [14] runs to an end position.
3. Clamping unit locked. Now the semi-rotary drive can become pressureless and the end position stays locked.
4. Clamping unit unlocked.
5. The semi-rotary drive [14] runs to the other end position.

8. Technical data

i Information

Use of the clamping unit DADL-EL-Q11 and locking of both end positions changes the minimum swivel angle of the semi-rotary drive [14] as limited by the width of cam [12].

DADL-EL-Q11-/DRD-...-E1	16	20/25	32	35/40	50	63
Swivel angle (min.) [°]	60		55	57	62	55
Swivel angle (max.) [°]	200					
Torsional backlash ²⁾ [°]	± 0.75	± 0.6	± 0.35	± 0.55	± 0.7	± 0.65

¹⁾ Tolerances for non-toleranced tightening torques M_A : ± 10 %

²⁾ Torsional backlash in the cam groove with active locking.
